INVINCIBLE PIN SHIELD

ELIMINATES IMPACT ENTIRELY

Traditional pin shields are built to absorb direct ball impact and that's exactly why they can fail. The Invincible Pin Shield™ takes a fundamentally different approach. Using an anti-static bristle system, bowling balls pass safely through the shield eliminating the root cause of failure.

EDGE STRING

Not a Replacement—An Upgrade

It's a permanent solution to a long-standing operational issue.

- Converts a repeat expense into a one-time upgrade
- Improves consistency across all lanes
- Designed to last—engineered for long-term durability

Built Around Real Operator Needs

- Prevents damage from ball impact
- Extends product life significantly
- Reduces replacement frequency and cost
- Improves uptime and reliability
- Reduces service interventions

How It Works

At the core of the Invincible Pin Shield™ is its anti-static bristle technology. Flexible bristles create a pass-through zone that allows bowling balls to move safely through the shield, dissipating energy instead of absorbing impact. This approach eliminates the structural stress that leads to cracking and failure in traditional solid designs.

Designed for Long-Term Value

Every feature of the Invincible Pin Shield™ contributes to lasting performance and operational efficiency.

- **Anti-Static Bristle Attachment**
  Enables ball pass-through without contact damage eliminating structural failure
- **Impact-Resistant Construction**
  Designed for use in high-traffic environments and long-term durability
- **Service-Friendly Design**
  Easy installation and integration reduces labor and minimizes downtime

Invincible Pin Shield™
Allows pass-through
Eliminates impact stress
Long-term solution
Low total cost of ownership

Upgrade Once. Eliminate Replacements

Available for both Standard and USBC-Approved EDGE String Machines:

- Kit, Shield Upgrade, ES Part# 610-051-085
- Kit, Shield Upgrade, ES-USBC Part# 610-051-086
